

Diligent Code Studio v0.6.6 Addendum

Consistent Guide Me Panel Sizing

This addendum continues the cumulative user manual. The original manual remains at the beginning, and this version adds guidance for the v0.6.6 user experience refinement.

What changed

- Guide Me / What this page does cards now use a shared, fixed desktop height so each workspace page feels visually consistent.
- Long page descriptions are line-clamped instead of stretching the card taller than other pages.
- The action area uses a consistent width so the Guide Me button and Start Here button do not resize the panel unpredictably.
- Advanced Mode no longer changes the guide card into a different-sized layout; the page guidance area stays stable across pages.
- On narrower screens, the guide panel can still grow naturally so content remains usable on smaller windows.

How to use it

Use the Guide Me area at the top of each workspace as a consistent orientation panel. It explains the page, shows a good next step, and provides a Guide Me button that sends the current screen context to AI Help.

Why this matters

A consistent guide panel makes the program easier for new users to learn. Each page now starts with the same visual structure, so users do not have to relearn the layout as they move through Start Here, Editor, Web Builder, Setup, Terminal, Git, and other workspace areas.
