

Version Addendum - v0.6.9 Menu Space Cleanup

This addendum is appended to the cumulative Diligent Code Studio manual. The original manual remains at the beginning, and new version notes are added after it.

What changed

- Removed Setup & Dependencies from the main Workspace Menu because Setup is already available in the top-right app controls.
- Kept the top-right Setup button as the primary shortcut for Setup & Dependencies.
- Preserved drag-and-drop Workspace Menu ordering and the Settings reset behavior.
- Older saved Workspace Menu preferences that still contain setup are filtered automatically after upgrading.
- The Setup page remains available from onboarding, guidance links, and the top-right Setup button.

Why this matters

The Workspace Menu is intended to show the primary focus areas of the program. Removing the duplicate Setup & Dependencies item gives the remaining workspace buttons more room and helps the menu fit on one line on more screen sizes.

How to access Setup & Dependencies now

Task	Where to go
Check or install required tools	Click Setup in the top-right app controls.
Use guided onboarding	Start Here and the Welcome Wizard can still route users to Setup.
Reset menu order	Open Settings and use Reset Menu Order. Setup will not be re-added to the Workspace Menu.

Version label

The app, package metadata, Tauri configuration, Cargo configuration, and cumulative manual are synchronized to version 0.6.9.
