

Version 0.6.8 Addendum - Open Source Credits

This addendum continues the cumulative manual policy. The original manual content remains at the beginning of the document, and this section adds the new open-source acknowledgments feature introduced in v0.6.8.

What changed

- Added a dedicated Open Source Credits workspace page.
- Added contributor/project cards with category, role, website, and a Visit button.
- Each Visit button opens the project website in the system default browser using the existing safe Tauri URL-opening command.
- Added Open Source Credits to the Workspace Menu and Start Here / Welcome navigation paths.
- Added a documentation file for third-party acknowledgments and updated release notes.

How to use the Open Source Credits page

- Open Diligent Code Studio and select Open Source Credits from the Workspace Menu.
- Review the projects grouped as frontend frameworks, editor components, Tauri/Rust libraries, developer tools, local AI, web builder tools, quality tools, and deployment tools.
- Click Visit on any card to open that project website in your default browser.
- Use this page as a user-visible acknowledgment area. It does not replace legal license review or third-party notices before public distribution.

Important release note

The Open Source Credits page is intended to honor the contributors and communities behind the software used by Diligent Code Studio. Before publishing a public release, continue to maintain LICENSE, NOTICE, package manifests, and any required third-party notices for the exact dependency versions included in the release.

Area	Examples included on the credits page
Frontend	React, React DOM, Vite, TypeScript, Monaco Editor, Lucide
Desktop/Rust	Tauri, Tauri API, Rust, Cargo, Serde, sha2, hex, rfd, reqwest, rustls
Tools	Node.js, npm, Git, GitHub CLI, Ollama
Web Builder	Tailwind CSS, Bootstrap, React Router, Framer Motion, Recharts
Quality/Deploy	ESLint, Prettier, Vercel CLI, Netlify CLI
