

Diligent Code Studio User Manual Addendum - v0.6.7

Editor Guide/Recents Layout Fix

This addendum extends the cumulative user manual. The original manual remains at the beginning of the PDF, and each release adds new pages after the existing content.

Area	What changed
Editor page layout	The main workspace now reserves separate rows for the top Workspace Menu, Guide panel, and Editor content area. This prevents the Guide panel from overlapping the Editor welcome state.
Recent Files	When no file is open, Recent Files now sits inside the Editor content area below the welcome text and scrolls inside that area if the list grows.
Short screens	Compact-height safeguards reduce Guide panel height and Recent Files height so both remain usable on smaller displays.
User experience	The Editor page should now feel cleaner: Guide Me stays above the workspace content, while recent files stay inside the Editor area.

Recommended testing after installing this version:

- Open the Editor page with no file open and confirm the Guide panel does not overlap Recent Files.
- Open several recent files and confirm the Recent Files card scrolls inside the Editor area when needed.
- Open a file and confirm the Monaco editor uses the full Editor content area below the Guide panel.
- Use the top-right Guide Me button and confirm AI Help still opens as a movable floating window.
